Redis cache

Software Architecture

Microservice

Monolithic

Versioning System

Git, Github, GitLab

Jenkins

CICD pipeline

June 2015 - June 2018

- ❖ I have a three-year diploma in Computer Science.

PROJECTS

I have worked on various projects. Below I have mentioned one.

10X PNS – B2C Health & Wellness Platform — Developed a consumer-facing health platform that allows users to order test kits and supplements, register vials, track orders, and view results. Contributed to both backend and frontend systems to ensure a seamless user experience and scalable architecture.

Digital Health Platform — Our solution offers the ultimate data interoperability solution by providing seamless integrations with the majority of major Electronic Health Record (EHR) systems and health information exchanges.

Shopperr — Shopperr is a scalable B2B platform that allows resellers and wholesalers to source international products directly from manufacturers at wholesale rates, without minimum order quantity requirements.

Ecommerce Project — Store Plugin is a robust e-commerce framework designed to help sellers build fully customizable online stores with complete control over product configurations, order workflows, and payments. It supports multiple payment gateways such as PayPal, Cheque, and Cash on Delivery, ensuring secure and diverse transaction options.

Learning Management Project — Conceptualize, An Educational website for students for preparation of JEE & Medical Exams, It includes learning materials like video, ebook, textual. In the project, students can give tests, view results, and subject-wise.

Enterprise Search Platform

Solr

Elasticsearch

API Documentation tools

Swagger

Postman

Additional Technologies

AWS

Google Cloud

KeyCloak identity and Access Management

Kafka

Docker

AWARDS

I have received “Employee Of The Month” from Ahead Websoft Technologies.

I have been awarded “Rising Star” by Ahead Websoft Technologies.
